MAPS & PLATES
TO THE MEMOIR ON THE
Geology & Volcanic Formations
OF CENTRAL FRANCE.

G. Poulett Tonge, Esq. F.R.S. F.G.S. C.O.
Published by Longman, E.C.
MAP of the VOLCANIC DISTRICT of the Interior of FRANCE.
PLATE I.

Cliff on the Banks of the Allier near Pont du Château.

Legend:
- Light blue: Limestone containing calcareous fragments.
- Pale brown: Limestone pure.
- Light brown: Limestone containing sandstone chinks.
- Dark brown: Sandstone.

Note: The sketch shows the cliffs along the banks of the Allier River near Pont du Château, highlighting the geological layers visible in the landscape.
Transverse view of the Mont de Punt from the summit of the Haychipas.
Eastern view of the Mont Domes taken from the Crags of Perseus between Pelorie and Channel.

PLATE V.
View of the Chain of Puyis, seen Geometry from the Summit of the Puy de Rodde.
PLATE XII.

View of the terminations of the lateral embranches of the Basaltic Platform of the Colivor (Ralecho) from the S.W.
